

The City of Clive recently developed schematic plans for a new library facility. Initially, we were working solely with our architectural firm but as we progressed further into the process we decided to bring on CSI early on in the project. We felt that having their professional advice would help us coordinate an economical building plan allowing us to maximize our budget for the building which would ultimately reduce the cost. Even though our referendum failed, the addition of CSI to our planning team was very fruitful and they were extremely helpful in cost estimating and developing more economical ways to accomplish the building plan while enhancing the architectural aesthetics.

Presently, CSI is our construction management firm overseeing a reroofing project for City Hall and our Dymond Public Safety buildings. Once again, the customer service emphasis and responsiveness, product knowledge and construction experience have been very beneficial.
